Index

A

Adjoint Operators $pp.134 - 135$
Asymptotically Stable $pp.82 - 84$
Attracting Fixed Point $pp.83 - 84$
Attractiveness $p.83$

C

Causal Systems $pp.3 - 4$
Cayley Hamilton Theorem $pp.121 - 122$
Characteristic Equation $p.37$
Complex Conjugate Transpose $pp.40 - 44$
Condition Number (Of a Matrix) $pp.61 - 62$
Controllability $p.132$
Controllability Gramian $p.135$
Convolution $pp.2 - 4$
Convolution (Discrete) $pp.14, 17$

D

Detectable $pp.145 - 146, 149$
Diagonal Coordinate Form $pp.38 - 46$
Diagonalization $p.46$
Dot Product $p.41$

E

Eigenvalue $pp.36 - 45, 56 - 59$
Eigenvector $pp.36 - 45$
Eigenvector (Left) $pp.50 - 51$
Equilibrium Point $pp.1, 5 - 10, 79 - 84$

F

Frequency Response $pp.98, 105$
Frobenius Norm $pp.62, 102 - 117$

G

Globally Asymptotically Stable $p.93$

H

H_∞ Norm $pp.108 - 119$
Hermitian Matrix $p.107$
Homogeneity $p.1$
Hurwitz Matrix $pp.94 - 96$

I

Impulse Response $pp.19 - 20, 29 - 30, 36$
Induced Norm $pp.103 - 104$
Infinity Norm $pp.100 - 101$
Inner Product $p.41$

J

Jacobi Liouville Formula $p.27$
Jordan Blocks $pp.46 - 50, 56 - 59, 77 - 78$

K

K Step Observability Matrix $pp.138 - 139$

Kalman Rank Test $p.136$

L

L1 Norm $pp.100 - 101$
L2 Induced Gain of a System $p.108$
L2 Norm $pp.100 - 101$
Lagrangian Multipliers $p.126$
Laplace Transform $pp.29 - 33$
Limit Cycle $p.82$
Linear Time Invariance $pp.8 - 9, 17$
Linearity $p.15$
Linearity (Systems) $p.1$
Linearization at a Fixed Point $pp.1, 7 - 10$
Lyapunov Functions $pp.85 - 96, 117 - 119, 124 - 126$

M

Marginally Stable $pp.53, 56$
Markov Parameters $p.20$
Matrix Exponentiation $pp.26 - 27, 36$
Matthew Equation $p.27$
Memoryless Systems $p.4$
Minimum Energy Input $pp.127 - 129, 133 - 136$
Modal Contributions of Initial Conditions $pp.41 - 45, 51$
Modal Decomposition $pp.35 - 45, 51$
Model Uncertainty $pp.109 - 115$

N

Negative Semidefinite Matrix $p.93$
Neumann Series $p.22$
Nilpotent Matrix $p.35$
Normal Matrix $pp.36 - 46$

O

Observability $pp.136 - 139$
Observer Based Controller $pp.148 - 149$
Output Feedback Design $p.147$

P

P Norm $pp.100 - 102$
Parallel Linkage Mechanisms $pp.59 - 60$
Pbh Test $p.136$
Phase Coordinate Form $p.6$
Phase Portrait $p.35$
Poles (Transfer Function) $pp.58 - 59$
Positive Definite Matrix $p.87$
Positive Semidefinite Matrix $p.125$
Power Spectral Density $pp.116 - 119$
Principle Minors $p.88$

Q

Quadratic Programming $pp.125 - 126$

R

Radially Unbounded $p.89$

Reachability $pp.120-126, 130, 132$
Reachability Gramian $pp.124-129, 133-135$
Resolvent $pp.17-18, 30, 36$
Resonance $p.50$
Routh Hurwitz Criterion $pp.77-80$

S

Shift Operator $pp.1-2$
Signal Norms $pp.96-104$
Singular Value Decomposition $pp.104-110, 128-129$
Singular Vectors $p.106$
Small Gain Theorem $pp.109-114$
Stability $pp.80-84$
Stabilizable $pp.141-143, 149$
Stable $pp.53-59, 91-94$
State Estimator Controller $pp.144-147$
State Feedback Controller $pp.140-144$
State Space Model $p.5$
State Transition Matrix $pp.11-13$
State Vector $p.5$
Superposition $pp.1, 13$
Supremum $p.98$
Symmetric Matrix $pp.86-96$
System Norms $pp.99-120$

T

Taylor Series Expansion $pp.7-8$
Time Invariance $pp.1-4$
Toeplitx Matrix $p.3$
Traction $pp.60-61$
Transfer Function $pp.18-20, 36, 52$
Transmission $p.61$

U

Underactuated Robotic Mechanisms $pp.59-77$
Unitary Diagonal Coordinate Transformation $pp.38-43, 50$

V

Variance Amplication $p.117$
Variations of Constants Formula $pp.24, 54$
Virtual Work $pp.63-64$

W

White in Time Gaussian Processes $pp.115-119$

Z

Z Transform $pp.14-22$
