

Index

A

- Adjoint operators *pp.*134 – 135
- Asymptotically stable *pp.*82 – 84
- Attracting fixed point *pp.*83 – 84
- Attractiveness *p.*83

C

- Causal systems *pp.*3 – 4
- Cayley-hamilton theorem *pp.*121 – 122
- Characteristic equation *p.*37
- Complex conjugate transpose *pp.*40 – 44
- Condition number (of a matrix) *pp.*61 – 62
- Controllability *p.*132
- Controllability gramian *p.*135
- Convolution *pp.*2 – 4
- Convolution (discrete) *pp.*14, 17

D

- Detectable *pp.*145 – 146, 149
- Diagonal coordinate form *pp.*38 – 46
- Diagonalization *p.*46
- Dot product *p.*41

E

- Eigenvalue *pp.*36 – 45, 56 – 59
- Eigenvector *pp.*36 – 45
- Eigenvector (left) *pp.*50 – 51
- Equilibrium point *pp.*1, 5 – 10, 79 – 84

F

- Frequency response *pp.*98, 105
- Frobenius norm *pp.*62, 102 – 117

G

- Globally asymptotically stable *p.*93

H

- H_∞ norm *pp.*108 – 119
- Hermitian matrix *p.*107
- Homogeneity *p.*1
- Hurwitz matrix *pp.*94 – 96

I

- Impulse response *pp.*19 – 20, 29 – 30, 36
- Induced norm *pp.*103 – 104
- Infinity norm *pp.*100 – 101
- Inner product *p.*41

J

- Jacobi-liouville formula *p.*27
- Jordan blocks *pp.*46 – 50, 56 – 59, 77 – 78

K

- K-step observability matrix *pp.*138 – 139

Kalman rank test	<i>p.136</i>
<i>L</i>	
L1 norm	<i>pp.100 – 101</i>
L2 induced gain of a system	<i>p.108</i>
L2 norm	<i>pp.100 – 101</i>
Lagrangian multipliers	<i>p.126</i>
Laplace transform	<i>pp.29 – 33</i>
Limit cycle	<i>p.82</i>
Linear time invariance	<i>pp.8 – 9, 17</i>
Linearity	<i>p.15</i>
Linearity (systems)	<i>p.1</i>
Linearization at a fixed point	<i>pp.1, 7 – 10</i>
Lyapunov functions	<i>pp.85 – 96, 117 – 119, 124 – 126</i>
<i>M</i>	
Marginally stable	<i>pp.53, 56</i>
Markov parameters	<i>p.20</i>
Matrix exponentiation	<i>pp.26 – 27, 36</i>
Matthew equation	<i>p.27</i>
Memoryless systems	<i>p.4</i>
Minimum energy input	<i>pp.127 – 129, 133 – 136</i>
Modal contributions of initial conditions	<i>pp.41 – 45, 51</i>
Modal decomposition	<i>pp.35 – 45, 51</i>
Model uncertainty	<i>pp.109 – 115</i>
<i>N</i>	
Negative semidefinite matrix	<i>p.93</i>
Neumann series	<i>p.22</i>
Nilpotent matrix	<i>p.35</i>
Normal matrix	<i>pp.36 – 46</i>
<i>O</i>	
Observability	<i>pp.136 – 139</i>
Observer based controller	<i>pp.148 – 149</i>
Output feedback design	<i>p.147</i>
<i>P</i>	
P norm	<i>pp.100 – 102</i>
Parallel linkage mechanisms	<i>pp.59 – 60</i>
Pbh test	<i>p.136</i>
Phase coordinate form	<i>p.6</i>
Phase portrait	<i>p.35</i>
Poles (transfer function)	<i>pp.58 – 59</i>
Positive definite matrix	<i>p.87</i>
Positive semidefinite matrix	<i>p.125</i>
Power spectral density	<i>pp.116 – 119</i>
Principle minors	<i>p.88</i>
<i>Q</i>	
Quadratic programming	<i>pp.125 – 126</i>
<i>R</i>	
Radially unbounded	<i>p.89</i>

Reachability	<i>pp.</i> 120 – 126, 130, 132
Reachability gramian	<i>pp.</i> 124 – 129, 133 – 135
Resolvent	<i>pp.</i> 17 – 18, 30, 36
Resonance	<i>p.</i> 50
Routh-hurwitz criterion	<i>pp.</i> 77 – 80
<i>S</i>	
Shift operator	<i>pp.</i> 1 – 2
Signal norms	<i>pp.</i> 96 – 104
Singular value decomposition	<i>pp.</i> 104 – 110, 128 – 129
Singular vectors	<i>p.</i> 106
Small-gain theorem	<i>pp.</i> 109 – 114
Stability	<i>pp.</i> 80 – 84
Stabilizable	<i>pp.</i> 141 – 143, 149
Stable	<i>pp.</i> 53 – 59, 91 – 94
State estimator controller	<i>pp.</i> 144 – 147
State feedback controller	<i>pp.</i> 140 – 144
State space model	<i>p.</i> 5
State transition matrix	<i>pp.</i> 11 – 13
State vector	<i>p.</i> 5
Superposition	<i>pp.</i> 1, 13
Supremum	<i>p.</i> 98
Symmetric matrix	<i>pp.</i> 86 – 96
System norms	<i>pp.</i> 99 – 120
<i>T</i>	
Taylor series expansion	<i>pp.</i> 7 – 8
Time invariance	<i>pp.</i> 1 – 4
Toeplitz matrix	<i>p.</i> 3
Traction	<i>pp.</i> 60 – 61
Transfer function	<i>pp.</i> 18 – 20, 36, 52
Transmission	<i>p.</i> 61
<i>U</i>	
Underactuated robotic mechanisms	<i>pp.</i> 59 – 77
Unitary diagonal coordinate transformation	<i>pp.</i> 38 – 43, 50
<i>V</i>	
Variance amplification	<i>p.</i> 117
Variations of constants formula	<i>pp.</i> 24, 54
Virtual work	<i>pp.</i> 63 – 64
<i>W</i>	
White-in-time gaussian processes	<i>pp.</i> 115 – 119
<i>Z</i>	
Z-transform	<i>pp.</i> 14 – 22
