

Index

A

- Adjugate matrix *pp.*120 – 121
- Asymptotically stable *p.*76
- Attracting fixed point *p.*76

B

- Basin boundary *p.*89
- Basin of attraction *p.*89
- Basis *pp.*125 – 127

C

- Cayley-hamilton theorem *pp.*139 – 140
- Characteristic equation *pp.*77, 138 – 139
- Column space *pp.*133 – 134
- Conservative system *pp.*89 – 91, 103
- Conserved quantity *p.*90
- Contour *pp.*91 – 92
- Coordinate transformation matrix *pp.*128 – 129
- Coordinate vector *pp.*126 – 127
- Corange *pp.*51 – 54
- Corank *pp.*51 – 54
- Cramer's rule *p.*121

D

- Deficient matrix *pp.*140 – 141
- Degenerate matrix *p.*139
- Determinant *pp.*78 – 81, 115 – 119
- Diagonalization *pp.*142 – 144
- Differential-algebraic equations *pp.*41 – 44, 47 – 48
- Differential-algebraic equations, differentiation index *pp.*47 – 48
- Differential-algebraic equations, model consistency *p.*44
- Differential-algebraic equations, regularity *p.*45
- Differential-algebraic equations, solution *p.*44
- Dimension (of a vector space) *pp.*125 – 126
- Dot product *pp.*134 – 135

E

- Eigenspace *p.*140
- Eigenvalue *pp.*77, 138 – 145
- Eigenvector *pp.*76 – 77, 138 – 145
- Elementary row operators *p.*107
- Existence and uniqueness theorem *p.*82

G

- Gaussian elimination *p.*104
- Gram schmidt orthogonality procedure *p.*137

H

- Hartman-grobman theorem *p.*88
- Heteroclinic trajectory *p.*94
- Homeomorphic *p.*88

Homogeneous equations	<i>p.105</i>
Hyperbolic fixed point	<i>pp.87 – 88</i>
Hysteresis	<i>p.42</i>
<i>I</i>	
Idempotent	<i>p.37</i>
Index theory	<i>pp.98 – 101</i>
Inner product	<i>pp.134 – 135</i>
Intersection (spaces)	<i>pp.130 – 131</i>
Isocline	<i>pp.74, 84</i>
<i>J</i>	
Jacobian	<i>p.85</i>
<i>L</i>	
Lagrangian	<i>p.45</i>
Lagrangian multipliers	<i>pp.45 – 46</i>
Liapunov fixed point	<i>p.76</i>
Lie bracket	<i>p.1</i>
Linear combination	<i>p.124</i>
Linear equations	<i>p.104</i>
Linear independence	<i>pp.124 – 125</i>
Linear transformation	<i>pp.131 – 133</i>
Linearization at a fixed point	<i>pp.84 – 85</i>
Lotka-volterra model of competition	<i>p.88</i>
<i>M</i>	
Manifolds, stable	<i>p.89</i>
Matrix cofactor	<i>pp.111, 118 – 120</i>
Matrix determinant	<i>pp.115 – 119</i>
Matrix inverse	<i>pp.110 – 115</i>
Matrix minor	<i>p.111</i>
Matrix operations	<i>p.106</i>
Model consistency	<i>p.44</i>
<i>N</i>	
Neutrally stable	<i>p.76</i>
Nullcline	<i>p.84</i>
Nullity	<i>p.134</i>
Nullspace	<i>pp.132 – 134</i>
<i>O</i>	
Orthogonal compliment	<i>pp.137 – 138</i>
Orthogonal set	<i>p.135</i>
Orthonormal	<i>pp.135 – 136</i>
Orthonormal basis	<i>p.136</i>
Outer product	<i>p.136</i>
Overdetermined system	<i>pp.19, 41</i>
<i>P</i>	
Phase (angle)	<i>p.61</i>
Phase drift	<i>p.68</i>
Phase lock	<i>p.67</i>
Phase portrait	<i>pp.74, 83</i>

Projection operator	<i>p.37</i>
<i>R</i>	
Range (matrix)	<i>pp.132 – 133</i>
Range of entrainment	<i>pp.68 – 69</i>
Rank	<i>pp.51, 53 – 54, 132 – 134</i>
Regular control problem	<i>p.45</i>
Reversible system	<i>pp.92 – 95</i>
Row echelon form	<i>p.107</i>
Row space	<i>p.134</i>
Runge-kutta method	<i>p.83</i>
<i>S</i>	
Saddle connection	<i>p.94</i>
Separatrix	<i>p.89</i>
Similar matrices	<i>p.142</i>
Singular matrix	<i>pp.41 – 42, 51, 110, 122</i>
Solution, differential-algebraic equations	<i>p.44</i>
Span	<i>pp.124 – 125</i>
Special euclidean group	<i>pp.1 – 2</i>
Special orthogonal group, $so(n)$	<i>pp.1 – 2</i>
Stable	<i>p.76</i>
Strain energy	<i>pp.5 – 7</i>
Structural stability	<i>p.88</i>
Subspace	<i>pp.129 – 130</i>
Sum (spaces)	<i>pp.130 – 131</i>
Symmetric matrix	<i>p.144</i>
<i>T</i>	
Time-reversal symmetry	<i>pp.92 – 93</i>
Trace	<i>pp.78 – 80</i>
<i>U</i>	
Underdetermined system	<i>pp.19, 41</i>
Unstable	<i>p.76</i>
<i>V</i>	
Vector field	<i>p.74</i>
Vector mapping	<i>p.127</i>
Vector space	<i>pp.122 – 123</i>
